

NEXUS

the right way
to LOGFAS

Logistics Functional Area Services (LOGFAS) is a NATO-owned suite of tools that provides planning, execution, and data management capabilities to NATO, NATO Nations and, their allied partners.

From data automation, to user training, to developing Concepts of Operations (CONOPS), we can help your organization get the most return on your LOGFAS investment.

Through use of its modules, LOGFAS supports:

Planning and execution of multinational force deployments

Sustainment of operations through management of multinational supply stocks

Inform operational and logistics decisions through insight of multinational unit and equipment readiness

Reduce the time and burden of coordinating movements, border crossings, and customs forms

Prioritize movements based upon unit capabilities and intended role in the force

Deconflicts ports, routes, and critical infrastructure with allies during deployments

Support sharing of movement and transportation assets among allies to reduce redundancy and cost

Solutions

Enabling LOGFAS to work for you

LOGFAS needs accurate data about the equipment, supplies, organization, and deployment plans for each unit.

NEXUS understands how LOGFAS works, and how nations use LOGFAS differently.

We can help you identify how best to populate LOGFAS with your information and how to get the most value from LOGFAS for your organization.

JEDI-X is the solution to translate national data into LOGFAS.

We assisted the US Army and Joint community in automating priority data into LOGFAS using our **JEDI-X automation tools** and helped identify which echelons within the Army are best suited to use LOGFAS.

Multinational Logistics Common Operating Picture (MN LOG COP) is the solution to simplify users access to the rich data available in LOGFAS. It requires no LOGFAS training, and is tailorable to each user's specific units, Nation(s), commodity areas, and viewing preferences - map or dashboard views.

Consulting

NEXUS has the LOGFAS knowledge and the experience with NATO and national military operations to develop a LOGFAS integration strategy for your organization, ensuring interoperability with national processes, and automating re-use of your existing national data.

We have worked with several nations to assess and streamline on-boarding of LOGFAS. Yours can be next.

Training

- › NEXUS offers a full range of training support, including user and network training for all aspects of LOGFAS.
- › Our **training courses can be tailored** to the exact LOGFAS approach your organization is implementing.
- › We offer **Mobile Training Teams (MTT)** to train large groups at your facilities, as well as **Remote Learning Courses (RLC)** for flexibility in scheduling, and reduced travel requirements.

Training is never an afterthought, and is integral to our approach to delivering a turnkey LOGFAS capability for your organization.

Get started and realize the benefits of LOGFAS. Contact us with questions or for a quote.
